LexEuropa Legal

Key Insights & Recommendations

Executive Summary

The firm shows strong overall financial performance (49.6% profit margin, 78.79% year-over-year growth), but detailed analysis reveals clear opportunities for improvement in how performance is distributed across lawyers, offices, and case-resolution strategy.

1. Financial Performance — A Clear Strength

- Profit margin: 49.6% — a strong figure for the legal services industry
- Year-over-year growth: 78.79% (from €620M in 2024 to €1.1B in 2025)

Conclusion: the firm's overall financial position is healthy and on a strong growth trajectory.

2. Outstanding Balance — Concerning on the Surface, Normal Underneath

The headline figure (€773M, or 27.6% of total revenue) appears concerning at first glance. However, breaking it down by case status revealed a different picture:

- The outstanding balance is concentrated in active cases (Open/Ongoing), not in closed ones
- Among cases that are actually closed, the uncollected rate is only 2.49% — a very healthy figure for any professional services firm

Conclusion: the outstanding balance largely represents Work in Progress (billed work not yet invoiced) rather than a genuine debt-collection crisis.

3. Win Rate — The Headline Number Hides the Real Driver

The observed win rate is 38.48%. This figure is calculated only over resolved cases — that is, cases with a final outcome (Won, Lost, or Settled). Cases still in progress (Ongoing) or withdrawn before resolution were deliberately excluded from the calculation, since including unresolved cases in the denominator would understate performance on cases the firm has actually completed.

Note: this differs from a simpler calculation method (win rate over ALL cases, including Ongoing and Withdrawn ones), which produces a lower figure of around 26.8%. Both numbers are mathematically correct — they simply answer slightly different questions. The 38.48% figure used in this report reflects win rate among resolved cases only, which is the more standard measure of a firm's actual courtroom/negotiation success rate.

Testing this win rate against several possible explanations showed:

Practice Area

No meaningful difference — all practice areas cluster within a narrow range of 34% to 41%.

Case Complexity

Only a small difference, and counter-intuitive: high-complexity cases actually performed slightly better than low-complexity ones.

Seniority

A noticeable difference exists, but it is not decisive on its own.

Individual Lawyer Performance

This is the single largest gap by far. Some lawyers exceed 85% success, while others fall below 25%, regardless of seniority or years of experience.

Recommendation: the large individual-level performance gaps — not explained by experience or seniority — warrant lawyer-level review rather than blanket policy changes at the department or seniority level.

4. Settlement vs. Winning in Court

- 41.19% of cases are resolved through settlement — the single highest share among all outcomes
- Client satisfaction in settled cases (6.5/10) sits much closer to won cases (8.5/10) than to lost cases (3.5/10)

Question for leadership: should the firm actively encourage settlement as a preferred strategy in suitable cases? This is a strategic decision requiring leadership judgment, not a conclusion the data can make on its own.

5. Office Performance — Frankfurt Leads in Efficiency, London in Volume

- Frankfurt: highest revenue per billable hour (€1,535/hour) — the strongest office in both efficiency and total revenue
- London: manages the largest case volume (1,941 cases) but is roughly 13% less efficient per hour than Frankfurt
- Outstanding balance percentage is consistent across all offices — no single office stands out as an outlier

Question for leadership: is London's relatively lower efficiency driven by more complex case mix, or does it warrant an operational review?

Methodological Note

Every conclusion above was reached after testing alternative explanations and confirming that comparisons were fair (for example, dividing outstanding balances by their matching revenue base rather than total firm-wide revenue, and clearly defining the denominator used for win rate). Points involving a strategic judgment call (such as favoring settlement or evaluating a specific office) are presented as open questions for leadership rather than final verdicts, since these decisions require broader business context than the data alone can provide.
